| <p>Posted by Mesut Duran on Tuesday, June 6th, 2006 4:22 PM</p> <p>Dear Class: This is to start our third online discussion. This discussion will focus on WebQuest applications in education. Your task in this discussion is to find out an existing webquest that you would like to use it in your future classroom. In your discussion, please tell us about how we could access the webquest (it's URL) that you share with us. Please also discuss what was so interesting in the webquest that you find it appealing to use it in your future classroom, and other reflections that you would like to provide. Please remember that the WebQuest portal at http://webquest.org might be a good place to start your search, but WWW has more resources for you to explore. Deadline to participate in this discussion is June 18th. Thanks, Mesut. </p> | <p>[Reply]</p> |
| <p>Posted by Irma Crespo on Sunday, June 18th, 2006 7:52 PM</p> <p>The site is activity-based for 7th Grade Pre-Algebra. The challenge is to encourage the Olympic Committee that their city is the best host for the Olympic Games. The task involves research, preparation of visual aids, and mathematical analysis. It allows role-playing and true-to-life assignments. The requirements to complete the task are clearly delineated and the resources are made readily available, including but not limited to score guides and math worksheets. It encompasses planning, development, and organization. The site is commendable for appreciation and application of Pre-Algebraic skills. </p> | <p>[Reply]</p> |
